

## Ivy Leaf Peperomia

*Peperomia albovittata*

Plant Height: 12 inches

Flower Height: 24 inches

Spread: 14 inches

Spacing: 12 inches

Sunlight: ● ●

Hardiness Zone: 10b

Other Names: Piccolo Banda Peperomia, Radiator Plant

### Description:

This stunning plant features intricate, heart shaped, silvery pale green leaves with dark purple, near black veining; rare, red flower stalks with green flowers appear in summer, but grown primarily for foliage; low to bright light, but no direct sun

### Features & Attributes

Ivy Leaf Peperomia's attractive textured heart-shaped leaves emerge light green, turning grayish green in colour with distinctive black veins and tinges of deep purple throughout the year on a plant with a mounded habit of growth. The brick red stems are very effective and add to the plant's interest.

This is an herbaceous evergreen houseplant with a mounded form. This plant may benefit from an occasional pruning to look its best.

### Planting & Growing

When grown indoors, Ivy Leaf Peperomia can be expected to grow to be about 12 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 14 inches. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 5 years. This houseplant performs well in both bright or indirect sunlight and strong artificial light, and can therefore be situated in almost any well-lit room or location. It is very adaptable to both dry and moist soil, but will not tolerate any standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It will benefit from a regular feeding with a general-purpose fertilizer with every second or third watering. It is not particular as to soil type or pH; an average potting soil should work just fine.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.
