Kudos™ Coral Hyssop

Agastache 'Kudos Coral'

Height: 20 inches

Spread: 16 inches

Sunlight: ○

Hardiness Zone: (annual)

Other Names: Anise Hyssop, Licorice Mint, Hummingbird Mint

Group/Class: Kudos Series

Description:

Easy to grow perennial flowers on airy spikes add lovely texture to any garden; outstanding coral color; a favorite for native butterflies and hummingbirds; aromatic, licorice scented foliage for a fragrant garden

Ornamental Features

Kudos Coral Hyssop features airy spikes of lightly-scented coral-pink tubular flowers rising above the foliage from early summer to early fall. The flowers are excellent for cutting. Its attractive fragrant narrow leaves emerge coppery-bronze in spring, turning grayish green in colour throughout the season.

Landscape Attributes

Kudos Coral Hyssop is an open herbaceous annual with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Kudos Coral Hyssop is recommended for the following landscape applications;

Planting & Growing

Kudos Coral Hyssop will grow to be about 17 inches tall at maturity, with a spread of 16 inches. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type, but has a definite preference for alkaline soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Kudos Coral Hyssop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
