

Yellow Polka Dot Bikini Hosta

Hosta 'Yellow Polka Dot Bikini'

Height: 12 inches

Spread: 24 inches

Sunlight: ● ●

Hardiness Zone: 2a

Other Names: Plantain Lily, Funkia

Description:

A low growing and vigorous variety that catches the eye in garden beds, borders and containers; foliage emerges green with bright yellow margins, maturing to apple green as the leaves flatten out; lavender flowers bloom in the midsummer months

Ornamental Features

Yellow Polka Dot Bikini Hosta features dainty spikes of lavender tubular flowers rising above the foliage in mid summer. Its attractive textured pointy leaves emerge yellow in spring, turning dark green in colour with distinctive lime green edges throughout the season.

Landscape Attributes

Yellow Polka Dot Bikini Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Yellow Polka Dot Bikini Hosta is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Yellow Polka Dot Bikini Hosta will grow to be about 10 inches tall at maturity, with a spread of 24 inches. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
