Height: 3 feet

Spread: 3 feet

Sunlight: ○ ◐ ●

Hardiness Zone: 6a

Other Names: Oak Leaf Hydrangea

Description:

An choice compact garden or massing shrub featuring showy spikes of flowers which fade from pure white to pink, interesting foliage with spectacular fall color and papery bark; somewhat coarse in appearance, best used in groupings

Ornamental Features

Pee Wee Hydrangea features bold fragrant conical white flowers with pink overtones at the ends of the branches from early to mid summer. The flowers are excellent for cutting. It has dark green deciduous foliage which emerges grayish green in spring. The fuzzy lobed leaves turn an outstanding brick red in the fall.

Landscape Attributes

Pee Wee Hydrangea is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Pee Wee Hydrangea is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Pee Wee Hydrangea will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub performs well in both full sun and full shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.

Pee Wee Hydrangea makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
